DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 42-43, and 48-58, as specifically drawn to a method for treating atherosclerosis and restenosis comprising administering a DNA methylation inhibitor in combination with an alkylating agent, classified in class 514, subclasses 49, 183.
- II. Claims 42-58, as specifically drawn to a method for treating benign tumors, cancers, and hematological disorders, comprising administering a DNA methylation inhibitor in combination with an alkylating agent, classified in class 514, subclass 824.

The inventions of Groups I and II represent distinct methods which differ at least in objectives, method steps, reagents and/or dosages and/or schedules used, response variables, and criteria for success. For example, Group I is drawn to treating atherosclerosis and restenosis, two disorders that are distinctly different from Group II because Group II is drawn to treating cancers, benign tumors, and hematological disorders. The treatment of cancers would require separate examinations and the consideration of different patentability issues versus the treatment of atherosclerosis and restenosis. Further, the two methods differ in their objectives, method steps, response variables, and criteria for success. Further, the methods are classified differently

Application/Control Number: 10/613,222

Art Unit: 1642

requiring different searches in the literature. Also, searching the inventions of Groups I and II would impose a serious search burden because the inventions are not co-extensive and would require the search and examination of a multitude of different sub-cancers, sub-benign cancers, and sub-hematological disorders.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because these inventions are distinct for the reasons given above and the search required for one group is not required for another group, restriction for examination purposes as indicated is proper.

Species Election:

Claims 44, 45, and 46 are generic to a plurality of disclosed patentably distinct species comprising different species of benign tumors (i.e., hemangiomas, hepatocellular adenoma, leiomyomas), different species of cancers (i.e., giant cell tumor, basal cell carcinoma, bone cancers), and different species of hematological disorders (i.e., acute myeloid leukemia, Hodgkin's disease, sickle cell anemia).

Claims 48 and 49 are generic to a plurality of disclosed patentably distinct species comprising different species of alkylating agents such as bischloroethylamines, nitrosoureas, and dacarbazine.

With regards to Claims 44-46, the above species represent separate and distinct cell types with different morphologies and functions such that one species could not be interchanged with the other. Further, the above species are distinct diseases which differ at least in etiology, pathology, and mechanisms. As such, each species would require different searches and the consideration of different patentability issues.

With regards to Claims 48-49, the products of the above species represent separate and distinct molecules with different structures and functions such that one species could not be interchanged with the other. As such, each species would require different searches and the consideration of different patentability issues.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after

Art Unit: 1642

the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary B. Nickol Ph.D. whose telephone number is 571-272-0835. The examiner can normally be reached on M-Th, 8:30-5:30; alternate Fri., 8:30-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey Siew can be reached on 571-272-0787. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
